

Tony Rodríguez

Full-Stack Software Engineer | AI & Machine Learning | Founder & CEO

Barcelona, Spain | tony.rod.bcn@gmail.com | [linkedin.com/in/tony-rod](https://www.linkedin.com/in/tony-rod) | github.com/TonyRod116 | tony-r.com | buildapp.es

PROFESSIONAL SUMMARY

Full-Stack Software Engineer and Founder & CEO of BuildAPP with 20+ years in construction and real estate. Founded BuildAPP in July 2025 and helped build BuildAPP Pro, a live construction-tech product available on web, iPhone and Android, while shaping the broader vision of a trusted construction ecosystem. Strongest in frontend and product implementation, with hands-on work across React, authentication, dashboards, mobile flows, AI-assisted budgeting, CI/CD, observability, alerts, and backend collaboration through pull requests. Completed General Assembly's 420-hour Software Engineering Bootcamp plus Harvard CS50 AI and Stanford/DeepLearning.AI Machine Learning training. Seeking frontend, full-stack, product, applied AI or solutions-engineering roles where software must solve real operational problems.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3

Frontend: React, Tailwind CSS, responsive UI, state management, forms, dashboards, authentication flows, UI/UX implementation

Backend & Databases: Node.js, Express.js, Django, Flask, REST APIs, PostgreSQL, MongoDB

AI & Machine Learning: TensorFlow, Keras, scikit-learn, NumPy, Pandas, supervised/unsupervised learning, neural networks, NLP foundations

Delivery & Tools: Git, GitHub, CLI/Unix, Postman, CI/CD pipelines, mobile delivery for iOS/Android, observability, logging, alerting, PR workflows

Product & Business: Construction operations, product discovery, workflow automation, stakeholder communication, project leadership, client-facing delivery

EXPERIENCE

Founder & CEO | BuildAPP Connecting Solutions, S.L. | Barcelona, Spain | Jul 2025 – Present

- Founded BuildAPP as a construction platform that starts with BuildAPP Pro and is built toward a broader ecosystem connecting clients, vetted professionals, AI-assisted proposals, trust, and project operations.
- Led product vision and hands-on technical delivery of BuildAPP Pro, a live product available across web, iPhone, and Android for professionals to budget faster, create visual proposals, manage clients, and share proposals more easily.
- Built most frontend work across core product flows, React UI, dashboards, authentication, responsive layouts, forms, and the visual proposal/budgeting experience.
- Contributed backend features through PR-based collaboration with the CTO/senior engineer across a production codebase with multiple REST API endpoints.
- Set up CI/CD pipelines, observability, logging, alerting, and release workflows to improve reliability, deployment confidence, and delivery quality.

Software Engineering Bootcamp Graduate | General Assembly | Remote | Jun 2025 – Sep 2025

- Completed a 420-hour immersive software engineering bootcamp covering frontend, backend, databases, REST APIs, authentication, Git/GitHub, CLI, debugging, Agile workflows, and computer-science fundamentals.
- Built full-stack projects including TradeLab (React, Django, PostgreSQL trading backtesting), Re-Lux (React, Node.js, MongoDB e-commerce), a first BuildApp MVP (MEN stack), and Tetris (JavaScript, HTML, CSS, DOM manipulation).

Founder & CEO | TotalHomes | Barcelona, Spain | Mar 2019 – Jul 2025

- Founded and operated a residential renovation and new-build business, managing client discovery, proposals, budgets, suppliers, subcontractors, timelines, and delivery quality.
- Led end-to-end operations from first client conversation to handover, translating client needs into clear scopes, practical solutions, and buildable execution plans.
- Developed the domain insight later used in BuildAPP: budget ambiguity, trust gaps, visual communication needs, and fragmented workflows in construction projects.

Project Manager | Casex O.I. | Barcelona, Spain | 2003 – 2019

- Managed residential projects, client relationships, budgets, sales support, and real-estate/construction delivery across long-cycle projects.

SELECTED TECHNICAL PROJECTS

BuildAPP Pro | Construction-tech product | Web, iOS & Android

- AI-assisted budgeting, visual proposals, client management, mobile delivery, PR-based backend collaboration, observability and release workflows.

TradeLab | Trading backtesting platform | React, Django, PostgreSQL

- Full-stack financial backtesting project with external financial data, optimized datasets, API integration and data visualization.

AI Projects | Python, search, logic, NLP and reinforcement learning

- Projects based on Harvard CS50 AI and Stanford/DeepLearning.AI learning, including graph search, Minimax, knowledge-based agents, NLP and game agents.

EDUCATION & CERTIFICATIONS

General Assembly — Software Engineering Bootcamp Online, Certificate of Completion, 420 hours | 2025

DeepLearning.AI & Stanford Online — Machine Learning Specialization: supervised/unsupervised learning, neural networks, decision trees, recommender systems, reinforcement learning, TensorFlow and Keras

Harvard University — CS50's Introduction to Artificial Intelligence with Python / CS50 AI Certificate: search, minimax, knowledge representation, probability, ML and NLP foundations
